JAYASHRI (she/her)

UI/UX × Full Stack — in bloom

Email Me

Overview

I'm learning UI/UX design and full stack web development to build practical, user-focused web applications. I enjoy working on both the design side by creating clean, intuitive interfaces and the development side, bringing ideas to life through code. My goal is to bridge the gap between design and functionality by creating responsive, accessible, and meaningful digital experiences. I'm continuously improving my skills through hands-on projects and real-world problem solving.
